

WLT-WALLS

Set Up Instructions

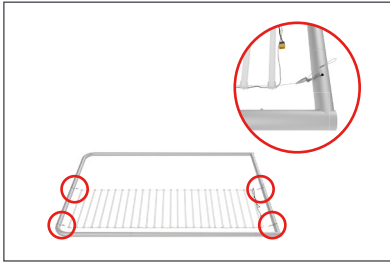

Step 1: Connect poles by pressing and pushing together, then connect corner sections to straight sections with matching shape symbols.

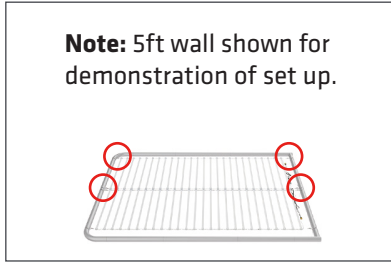

Step 2: Take out the LED Light Array and gently unroll on the ground with lights face down. **Warning!** Do not drag lights across ground or it could break the LED lights.

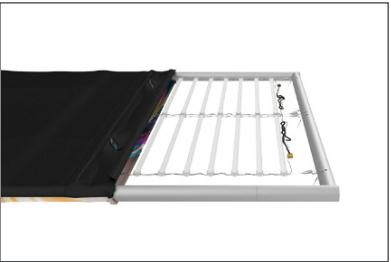

Step 3: Attach the LED Light Array to top and bottom of frame. Pull extra cable leash at bottom to secure light array into place.

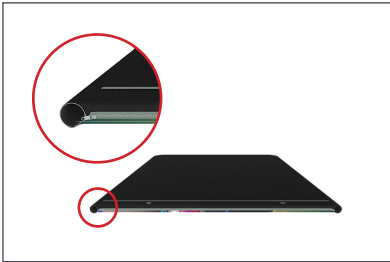

Step 4: Repeat Step 3 until all light arrays are in place.

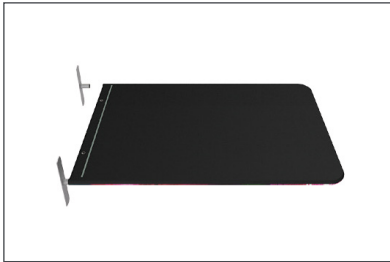

Step 5: Unzip print and lay image face down. Slide print onto the frame like a pillow case.

Step 6: Zip the edge of graphic closed.

Step 7: Connect the feet by inserting into the bottom holes of frame and pressing firmly.

Step 8: Open the rear zipper and feed power cables through holes.

Step 9: Connect power cables to a power supply. **Note:** One power supply needed per Light Array.

Step 10: Collect cables together and close zipper. Plug power supply into electrical unit and turn on.
